

THE NEXT GENERATION SIM

eSIM

MobileWare is a global data MVNO (Mobile Virtual Network Operator) that delivers innovative enterprise-grade, global connectivity, and IoT services. Our wireless solutions are designed to provide reliable, secure, and continuous data connectivity between businesses, people, and things wherever the device is located. Zero-touch deployment makes it simple for IT managers to remotely configure devices in a fast and secure manner without physically setting up each device.

THE CHALLENGE

Deploying and managing enterprise devices can be challenging. Configuring and provisioning devices in a secure manner and then deploying them to employees is very time-consuming and cumbersome.

THE SOLUTION

eSIM technology offers a robust, scalable solution to the limitations of the traditional SIM.

The MobileWare eSIM is the easiest way to remotely provision eSIM-enabled devices and connect them to the internet worldwide. It streamlines global or local deployment and ensures secure connectivity wherever the device is located.

eSIM BENEFITS

-  Zero-touch Deployment
-  Simpler Logistics
-  Secure
-  Scalable
-  Centrally & Remotely Managed

MOBILEWARE BENEFITS

-  Turn-key Solution
-  Business Intelligence
-  Continuous Connectivity
-  Network Redundancy & Automatic Failover
-  Cybersecurity & Deep Packet Inspection (DPI)

ZERO-TOUCH DEPLOYMENT

Zero-touch deployment makes it simple for IT managers to remotely configure devices in a fast and secure manner on a broad scale without the need to physically set up each device.
